Weekly equity markets snapshot

As of June 4, 2021

Market related news for the week ending June 4, 2021

- Tuesday oil prices jumped to a two-year high as OPEC+ confirmed a gradual production increase at its monthly meeting. Gas prices at the pump hit their highest level in seven years over the Memorial Day weekend, according to data from GasBuddy.
- Wednesday AMC shares rose 95% despite four trading halts, marking a 3600% return since the beginning of the year. AMC used the spike in its stock price to raise more capital by selling 11.5m shares. Around the same time, Jeffries and Raymond James blocked sales of AMC shorts, contributing to an 18% fall in the stock's price Thursday and a 6.75 drop Friday.
- President Biden announced plans for a 15% tax floor rather than raising the corporate tax rate to 28% to persuade Republicans to support his infrastructure package. For reference, 116 companies in the S&P 500 reported an effective tax rate less than 15% last year. Relatedly, the G-7 announced they were near agreement for at least a 15% global minimum corporate tax rate.
- The Fed announced this week that it will begin selling off its portfolio of corporate debt and ETFs over the next six months, beginning with ETFs and then progressing to bond holdings through the summer. Sales are likely to have a minimal impact on credit markets as the size of the facility is only slightly above \$13 billion, however some are interpreting this as a sign mortgage-backed securities and Treasury purchases are likely to be tapered sooner rather than later.
- Friday oil prices capped a 5% rise for the week.

Other Definitions

Duration: incorporates a bond's yield, coupon, final maturity and call features into one number, expressed in years, that indicates how price-sensitive a bond or portfolio is to changes in interest rates. Effective duration can also be defined as the approximate percentage change in a security's price that will result from a 1% (100-basis-point) change in its yield.

Yield to Worst: lowest potential yield that can be received on a bond without the issuer defaulting. This yield measure takes in to account any bond calls or sinking funds.

OAS: acronym for "option adjusted spread" which is the spread that has to be added to the Treasury yield curve in a pricing model (including embedded options) to discount a security to match its market price.
